

Extra security resources

REST APIs with Flask and Python

Explaining exactly how HTTPS and SSL works is outside the scope of the course. However, it's interesting and I appreciate you may want this information.

Here's a couple resources I think explain things well:

- <http://robertheaton.com/2014/03/27/how-does-https-actually-work/>
- <https://www.digicert.com/ssl/>
- <https://www.websecurity.symantec.com/security-topics/how-does-ssl-handshake-work>

Hope you've enjoyed the course!

Kind regards,
Jose—your instructor
